A

Input Enable switch is used to power cycle the 5V and 3.3V rails if the system management controller watch expires.

The Enable input is pulled high to prevent loss of power to the Pi when the SMC firmware is updated (fail-on)

Digital Output Block

Output buffers can sink and source 16mA per channel. Do not exceed 5.5V input to the buffer referenced to ground. The buffer does not provide current limiting.

ESD protected from human body model to 2kV.
